

## Zoning Map Amendment Criteria for Plains Industrial Park

The applicant is requesting a rezoning of the lot from its current A-2 zone to the AG and HI zone. This project is on primarily undeveloped land that has an existing platted dirt road called HR Ranch Road. This road will be paved with development. The AG zone is being requested as a holding zone until such time that there is a development request for the site. The HI zone is requested for an above ground tank farm for Plains All American Pipeline Company. The Comprehensive plan calls for Industrial development in the area which HI is usable zone. The area to the south is zoned HI as well as GDC Development and most of the Cheyenne Leads Industrial Park. It is assumed that the AG lots will also be zoned HI or another commercial zone at the time of development. The primary reason for the zone change is to allow industrial development on the lots which is not allowed in the A-2 zone. The AG zone change is because there is no A-2 zone in the UDC. The development will be able to be developed according to the subdivision standards for HI as well as meet the intent and applicability of the HI district. Future development of the property will be required to go through additional City applications as well as some State procedures. This application will not harm the public health, safety or general welfare of the public.
