WORK DESCRIPTION:	Zone change from AR Agricultural Residential to LI Light Industrial		
DOCUMENTS:	Application, Zone Change Map		
OTHER:	Adjacent property owners were notified by mail		
LEGAL:	Lots 1-3, Block 1, Polk Addition (replat in process), Cheyenne, Wyoming		
LOCATION:	Northeast corner of East Pershing Boulevard and Polk Avenue		
PROPERTY SIZE:	8.82 acres		
CURRENT ZONING:	AR Agricultural Residential		
PROPOSED ZONING:	LI Light Industrial		
LAND USE:	Vacant		
PROPOSED LAND USE:	Storage units (Storage Park)		

SURROUNDING LAND USES:

DIRECTION	LAND USE(S)	ZONING	ANNEXATION STATUS
West	Rural Residential, Storage Park, Single-Family Residential, Vacant Commercial	AR, PUD, MU	County
North	Rural Residential	AR	County
East	Rural Residential	AR	County
South	Single-Family Residential	MR-2	City

SUMMARY:

The applicant is requesting a zone change from AR Agricultural Residential to LI Light Industrial for a vacant 8.82 acre site located on the northeast corner of Polk Avenue and Pershing Boulevard in order to enable the construction of a commercial storage facility on the site. This zone change is being requested in conjunction with and dependent upon the approval of a Street Vacation and Final Plat. The City's future land use plan designates this specific area as Urban

Residential, the area to the west as Mixed-Use Commercial-Emphasis and the area to the east as Open Space & Parks. While the future land use plan does not indicate an LI zone district for this parcel the property is situated within an area that could support an LI zone district for the following reasons: Existing land uses in the area consist of mixed uses which include an existing storage unit facility and a manufacturer of asphalt and concrete sealer. The site is largely separated from urban residential zone districts by major roadways to the north and south and Dry Creek to the east which provides buffers between these residential zone districts and the proposed zone district. Additionally, at the site level the lots are large enough to provide buffers if necessary to mitigate any potential land use conflicts between it and adjacent buildings and uses. Lastly, the parcels' adjacency to Dry Creek and its floodway and floodplain may be more appropriate for the proposed use as opposed to a residential one.

ZONE CHANGE DATA:

The applicant is requesting a Zone District Map Amendment (Zone Change) from AR Agricultural Residential to LI Light Industrial for an 8.82 acre site in order to construct commercial storage facilities upon the site. This zone change is being requested in conjunction with and dependent upon the approval of a Street Vacation and Final Plat.

ZONE CHANGE ANALYSIS:

The subject property consists of three vacant parcels (replat in process) and includes vacated portions of Cheyenne Street and Van Buren Avenue (street vacation in process). The 8.82 acre site is square in shape and measures approximately 618'x 626'. The site is located on the east side of the City on the northeast corner of Pershing Boulevard and Polk Avenue. To the west, U.S. 30 crosses Pershing Boulevard at a 45 degree angle which chops the area into a triangle and creates a physical barrier between the subject property and the residential land uses to the north. Dry Creek cuts along the northeast corner of the subject property and as a result portions of this corner reside in a FEMA floodway or a 100-year FEMA floodplain.

The subject property was annexed to the City in 2005 but is surrounded by County property to the west, north and east. The subject property is currently zoned AR Agricultural Residential as is the property to the north and east. To the south and across Pershing Boulevard is a MR-2 Medium-Density Residential-Developing zone district and to the west and across the street from Polk Avenue reside AR, PUD Planned Unit Development and MU Mixed-use zoning districts.

Adjacent to the subject property to the north and east reside single-family homes on rural lots. To the south of the subject property and across Pershing Boulevard reside single-family homes on suburban lots. To the west and across from Polk Avenue resides a mix of residential, commercial and industrial uses. The commercial and industrial uses include a storage park and a manufacturer of asphalt and concrete sealer products.

The applicant is proposing to construct a storage park on the property. A storage park is defined in the UDC as a Service Use where individual units are accessed independently from the exterior of a building through garage bay doors and are offered for rent or lease for the storage of personal property. The requested storage park use is permitted by right in the Light Industrial (LI) and Heavy Industrial (HI) zoning districts and permitted after conditional discretionary

review in the Community Business (CB) and the Mixed-Use Employment (MUE) zoning districts. In order to accommodate the storage park use on this property, the applicant is requesting a zone change to LI.

The LI zone district is intended for offices, distribution and warehouses as well as manufacturing and fabrication. Supporting retail uses and services are also appropriate as secondary uses. The uses and building and site designs associated with uses in this district produce little or no impacts beyond the property lines. This district is applicable to larger land areas that are capable of providing buffers to adjacent buildings and land uses to minimize the potential for incompatible and negative impacts of uses in the district.

The City's future land use plan, ShapeCheyenne, designates this specific area as Urban Residential, the area to the west as Mixed-Use Commercial Emphasis and the area to the east as Open Space & Parks. The purpose of the future land use plan is to provide a general framework for neighborhoods and activity centers, not to predetermine specific land uses for individual parcels, and is intended to provide some flexibility for the market to help determine which uses are needed at a given time (ShapeCheyenne 2-8).

While LI is not an applicable zone district in the Urban Residential category, this property is located within an area that could support an LI zone district based on the existing development pattern and the natural and built features of the area. To the west reside commercial and industrial land uses, which include a storage park, while a majority of the land to the east resides in a flood zone or flood plain and is not suitable or likely to be highly developed. Also, the subject property is separated from residential neighborhoods by U.S. 30 and Pershing Boulevard and its proposed use should produce little or no impact beyond its property line. Furthermore, the applicant is proposing a use for the property that will serve the discretionary needs of a number of residential neighborhoods. The location of the subject property to similar land uses to the west and to built and natural land features which provide buffers from residential areas may make it appropriate for an LI zone district designation.

ZONE CHANGE REVIEW CRITERIA ANALYSIS:

In reviewing, providing comments, and making recommendations and decisions on a proposed zoning map amendment, the staff, Planning Commission and City Council shall use the following criteria:

1. The application is in accordance with the development policies and physical patterns identified in the Comprehensive Plan.

While the proposed LI zone district and storage park use are not consistent with the future land use plan for this particular parcel, the zone district and use could be supported based on the existing development patterns and natural and built features of the area. For example, existing land uses to the west of the subject property consist of mixed uses which include an existing storage park. Also, the parcels are largely separated from residential uses by major roadways to the north and south and Dry Creek to the east which provides buffers between the proposed use and the existing residential uses to the north, east and south. Additionally, at the site level the lots are large enough to provide buffers, if necessary, to mitigate any potential land use conflicts between it and adjacent buildings and uses. Lastly, the parcels' adjacency to Dry Creek and its floodway and floodplain may be more appropriate for the proposed use as opposed to a residential use.

2. The application is compatible with nearby property, specifically considering existing zoning, the Comprehensive Plan, and any other official plans and policies created under the guidance of that plan for these areas.

The proposed use is largely compatible with nearby property. A similar use as the proposed use already exists to the west without any apparent conflicts with existing surrounding residential uses. It is expected that the proposed land use would also be compatible with existing land uses. A site plan for the proposed use would be required at the time of development and would require design elements which would serve to mitigate potential conflict between LI uses and agricultural residential uses.

3. The suitability of the subject property for development according to the standards and uses of the existing zoning district, compared to the suitability of the subject property for development according to the standards and uses of the proposed zoning district.

While the parcel would be able to meet the lot and building standards of either a LI zone district or an AR zone district, the AR zone district is intended for agricultural residential and is not a typical "City" zone district as it does not enable the types of land uses that typify urban areas. This makes LI a more suitable zone district for the City than an AR one. Furthermore, due to the parcel's location near the Dry Creek floodway and floodplain, an industrial development as opposed to a residential one may be more appropriate for this area. The proposed use is permitted by right in the LI zone district while not permitted in the AR zone district.

4. The ability of the subject property and surrounding vicinity to be developed according to the Subdivision Standards in Article 4 considering the proposed zoning.

The application proposes an appropriate block and lot design as well as a sewer, storm drainage and utility plan. It also provides for necessary right-of-way improvements. Furthermore, even though it is not required, the applicant is contributing to the development of the City's open space system by dedicating land toward the Greenway path. As such, a zone change to LI would be able to meet the purposes, intent and all applicable Subdivision Standards outlined in Article 4, Section 4.1.3.

5. The ability of the application to support the Intent and Applicability statements of the proposed zoning district, and achieve the Design Objectives of any specific standards.

Pursuant to Article 5, section 5.5.1d, there are no lot area, lot frontage or building height zoning requirements in the LI zoning districts. However, this zoning district does have a 25' setback requirement for all property lines adjacent to streets and a maximum lot coverage requirement of 85%. The proposed application will be able to meet these requirements.

The LI zone district is intended for offices, distribution and warehouses as well as manufacturing and fabrication. Supporting retail uses and services are also appropriate as secondary uses. The uses and building and site designs associated with uses in this district produce little or no impacts beyond the property lines. This district is applicable to larger land areas that are capable of providing buffers to adjacent sites, buildings, and land uses to minimize the potential for incompatible and negative impacts of uses in the district. The subject property's use as an outdoor storage park as well as its site features support the use and urban form intended for the proposed LI zone district. It is also expected that the application would be able to meet the general design regulations outlined in Article 6.

6. The ability of all potential future development to meet all applicable standards for development in the proposed zoning district, including other development options in the

event that any specific development proposed in association with the application is not executed after approval.

The LI zoning district provides for a range of light industrial uses, employment uses and for some service, commercial and public service uses. It is expected that the subject property would be able to meet all applicable standards for development for any permitted LI zone district use and be developed in a manner to reduce land use conflicts.

7. The review and recommendations of other reviewing bodies.

Please see review comments.

8. Whether the application will harm the public health, safety, or general welfare.

Granting the zone change request from AR Agricultural Residential to LI Light Industrial will not harm the public health, safety, or general welfare.

REVIEWING AGENCIES AND REVIEWER'S COMMENTS:

County Planning

1. The proposed rezoning from AR-Agricultural to LI-Light Industrial is not consistent with PlanCheyenne's urban residential designation and is not compatible with existing residential land uses in the area.

Note: The Development Office is aware that the proposed rezone is not consistent with the future land use plan but believes that the zone change request can be reasonably supported.

2. An amendment to PlanCheyenne should be considered first. The proposed rezoning creates "spot zoning", as the nearest Industrial zone is almost one mile distant. This would also create the potential for wholesale land use change in this unincorporated area. If this is the City's intent, there should be a larger conversation with the County and community.

Note: An amendment to the future land use plan is not being pursued at this time, only the zone change request. The Development Office believes that the zone change request can be reasonably supported.

3. The application states a proposed use as storage. An existing storage facility cited (Sunnyside 5th Tracts 141, 142) was developed as a Planned Unit Development, approved 16 July 1996. This PUD restricts permitted uses and adopts setbacks, coverage, parking and lighting requirements consistent with the CB Community Business Zone. A PUD may mitigate impacts on the community which the Industrial zoning does not.

Note: The LI zone district has the same setback and lot coverage requirements as the CB zone district. Additionally, a site plan would be required at the time of development which would require design elements such as landscape buffers to help mitigate potential impacts between adjacent LI and AR zone districts.

4. The Road Vacation Map for Cheyenne Street and Van Buren Avenue would leave legally divided parcels without legal public access (Sunnyside Addition Filing Tracks 130, 131).

Note: To be addressed in the respective Street Vacation request.

5. A portion of Van Buren Avenue was vacated by the Laramie County Board 19 July 1994, Dry Creek flood control project. A utility easement was reserved for Cheyenne Light, Fuel and Power.

Note: To be addressed in the respective Final Plat.

6. The proposed road vacation would also leave parcels to the north and east partially annexed to the City, possibly leading to confusion over land use authority. If the ROW is vacated, the split parcel areas should be de-annexed.

Note: To be addressed in the respective Street Vacation request.

Traffic Engineering

1. A Transportation Worksheet to determine TIA/TIS requirements was provided as required (ref. Article 3, Section 3.1.1.c, UDC). The request for TIS Waiver was signed as required. The number of trips generated is less than the threshold amount which triggers a TIA or TIS. The waiver request is hereby granted. If development occurs in a manner not in keeping with the land use assumptions contained in the Worksheet for Polk Addition, a Transportation Impact Analysis or Study shall be required.
2. A driveway approach for minor arterial design street type should be radial curb (ref. Article 4, Section 4.3.4, UDC). A driveway approach for local street type should be flared curb. Design standards for intersections of public streets can be utilized where high speed or frequent vehicle access is expected (generally access points with anticipated ADT more than 500 vehicles).
3. The Sight Distance Triangle shall maintain adequate, unobstructed sight distance in both directions from the access driveway (ref. Article 4, Section 4.3.5.c, UDC). This triangular space is to be kept free from all obstructions to vision, including plant materials and vegetation, between the heights of 2.5 and 12 feet above the street grades. The sight distance triangle should be calculated utilizing criteria for controlled intersections. Site triangles should be shown on the site plan and the landscape plan.
4. Curb ramps meeting ADA Accessibility Standards shall provide a direct, non-diverted approach along the block, into the pedestrian crossing (ref. Article 4, Section 4.3.5.e, UDC).
5. Appropriate access design is highly dependent on context, specific transportation goals, and site variables (ref. Article 4, Section 4.3.6.b, UDC). Alternative standards that better meet the intent of Block and Lot Access may be approved based on a Transportation Impact Study. Trip generation and trip distribution as well as ADT information is needed to design the driveway approach for type, width, and throat length. The driveway throat length is typically defined as the distance measured from the back of sidewalk or stop bar exiting the site to the first point of conflict in the driveway. Primary driveways into mixed use, commercial and employment centers shall be of sufficient length to allow vehicles to enter and not be impacted from on-site conflicts in which traffic backs out onto the street system. Parking spaces backing into the driveway throat will impact the internal circulation and could result in stacking of vehicles on the roadway and should be avoided. The access design, number, location, width and driveway length shall meet with the approval of the City Engineer.
6. Lot access width shall be limited based upon the lot frontages subject to the standards in Table 4-13 (ref. Article 4, Section 4.3.6.c, UDC). Standards for specific street classifications or street design types may supersede these general allowances.
7. Lot access points shall be separated from streets and other access points along a single block face and from the street edge of the intersection as specified for each specific street design type (ref. Article 4, Section 4.3.6.d, UDC). The minimum access spacing for minor arterial streets from a property corner or another access is 330 feet. The minimum access spacing for Commercial/Industrial local streets from a property corner or another access is 100 feet and 30 feet, respectively.

8. At Pedestrian crossings at access points that are greater than 22 feet wide, a crosswalk differentiated from vehicle surfaces by different materials, texture or color, or a speed table should be used (ref. Article 4, Section 4.3.6.e.2, UDC).
9. Pedestrian crossings at access points where high speed or frequent vehicle access is expected (generally access points with anticipated ADT more than 500 vehicles), lot access at street grade may be allowed provided design standards for intersections of public streets, including intersection design are used (ref. Article 4, Section 4.3.6.e.3, UDC).
10. Parking or loading areas that require backing onto a public street are prohibited (ref. Article 4, Section 4.3.6.g.5, UDC).
11. Sight distance requirements for street intersections should be applied to driveways where volumes and speed of traffic in the street and volumes for the access point warrant treating it as a street intersection (ref. Article 4, Section 4.3.6.g.5, UDC).
12. The location of access to properties on opposite sides of collector roadways shall be coordinated so they do not interfere with one another (ref. Article 4, Section 4.3.7.e, UDC). Driveway approaches directly opposite each other are desirable. Show opposing driveways on the site plan.
13. The builder and/or the developer are responsible for the construction of sidewalks (ref. Article 4, Section 4.5.2.b, UDC).
14. All mandatory signage and striping (ref. Article 4, Section 4.5.2.d, UDC) are to be shown in the project civil improvement drawings in conformity with the City of Cheyenne Standards and the Manual on Uniform Traffic Control Devices (MUTCD).
15. All situations where a sidewalk or pedestrian facility intersects with an internal vehicle circulation shall be treated by one of the following manners: (1) the material, layout and grade of the pedestrian access shall be continuous as it crosses the grade of the driveway; or (2) a crosswalk differentiated from vehicle surfaces by different materials, texture or color, or a speed table (ref. Article 6, Section 6.2.3.a, UDC).
16. The number, location, dimension, and signing of accessible parking stalls shall be in accordance with the current ADA Standards for Accessible Design (ref. Article 6, Section 6.2.4.d, UDC).
17. Stall layout width and length and aisle width for angle parking is as specified in Article 6 of the UDC (ref. Article 6, Section 6.2.8.b, UDC).
18. All parking, circulation and loading areas shall be graded for proper drainage and be paved (ref. Article 6, Section 6.2.8.c, UDC). The maximum grade shall not exceed 8%. The maximum desirable grade in any direction is 5%.
19. As part of the project, the applicant shall provide in sufficient detail the project's proposal to provide pedestrian and bicycle connections within the site to the local offsite pedestrian and bicycle destinations in close proximity to the project (ref. Appendix E, UDC). This assessment shall describe the directness of the route to and from various parts of the project, the continuity of the pedestrian and bicycle system to reach these destinations and the design elements to assure safe access.
20. Easements shall be graded to facilitate the passage of sewer maintenance vehicles without high centering. Paved or gravel access shall be provided to all manholes that are to be owned and maintained by the BOPU, which are on sewer mains that are twelve (12) inches in diameter or smaller. The paved or gravel access shall be capable of supporting an H20 vehicle under all weather conditions (Section 02700, City of Cheyenne & BOPU Construction Standards and Specifications).

Note: Items 2-20 to be addressed during the site plan review process.

The proposed zone change of LI is not consistent with the PlanCheyenne Master Land Use Plan which is designated as Urban Residential. However, this type of land use would be consistent with the general character of the vicinity and is practically buffered by Dry Creek channel and Pershing Blvd. The MPO is aware that if in the future a different land use, other than storage units, was proposed for this LI zone further public review would be required.

ORDINANCE NO. _____

ENTITLED: "AN ORDINANCE PURSUANT TO SECTION 2.2.1, ZONING MAP AMENDMENT, SECTION 5.1.2, ZONING DISTRICTS ESTABLISHED, AND SECTION 5.1.3, OFFICIAL ZONING MAP, OF THE CHEYENNE UNIFIED DEVELOPMENT CODE, CHANGING THE ZONING CLASSIFICATION FROM AR AGRICULTURAL RESIDENTIAL TO LI LIGHT INDUSTRIAL FOR LOTS 1-3, BLOCK 1, POLK ADDITION, CHEYENNE, WYOMING (LOCATED AT THE NORTHEAST CORNER OF THE INTERSECTION OF E. PERSHING BOULEVARD AND POLK AVENUE)."

BE IT ORDAINED BY THE GOVERNING BODY OF THE CITY OF CHEYENNE, WYOMING:

Section 1. That the owner(s) of the property described herein has (have) applied for a zoning map amendment ("zone change") for said property in accordance with Section 2.2.1, Zoning Map Amendment, of the Cheyenne Unified Development Code ("UDC").

Section 2. That on July 1, 2013, the City of Cheyenne Planning Commission conducted a public hearing, reviewed the proposed zone change that is the subject of this ordinance, and recommended approval of said zone change.

Section 3. That the Governing Body of the City of Cheyenne finds that the zone change that is the subject of this ordinance meets the criteria specified in Section 2.2.1.d of the UDC.

Section 4. That, in accordance with Section 2.2.1, Zoning Map Amendment, Section 5.1.2, Zoning Districts Established, and Section 5.1.3, Official Zoning Map, of the UDC, the aforementioned application is hereby approved and the zoning classification of the real property described as Lots 1-3, Block 1, Polk Addition, Cheyenne, Wyoming is hereby changed to LI Light Industrial.

Section 5. That the City Engineer is hereby authorized and directed to alter and amend the Official Zoning Map as described in Section 5.1.3 of the UDC to comply with the zone change as described in Section 4 above when this ordinance takes effect in accordance with Section 7 below.

Section 6. Sections, paragraphs, sentences, clauses and phrases of this ordinance are severable. If any section, paragraph, sentence, clause, or phrase of this ordinance is declared unconstitutional, such unconstitutionality shall not affect any of the remaining sections, paragraphs, sentences, clauses, and phrases.

Section 7. That this ordinance shall be in full force and effect upon its approval and publication and upon the official filing of the affiliated *Polk Addition* final plat map with the County Clerk and Ex-Officio Register of Deeds for Laramie County, Wyoming.
